

# Quad-Tex

## FEEL THE DIFFERENCE

The result of the collaboration between Teijin and Naish, Quad-Tex is the strongest, most responsive kite canopy material available on the market. Developed and tested over the course of 3 years, Quad-Tex turns the traditional method of canopy construction on its head.

## LEAD WITH STRENGTH

While other canopies start with a base layer of polyester yarn, Quad-Tex takes a “strength-first” approach constructing the matrix with 4x-reinforced ripstop, then balancing the grid with the optimal strength-to-weight ratio for heavy-duty rip protection. High tenacity polyester yarn fills out the framework and is reinforced with Teijin’s high-grade resin for increased water-resistance and longevity.

## PROTECTING YOUR INVESTMENT

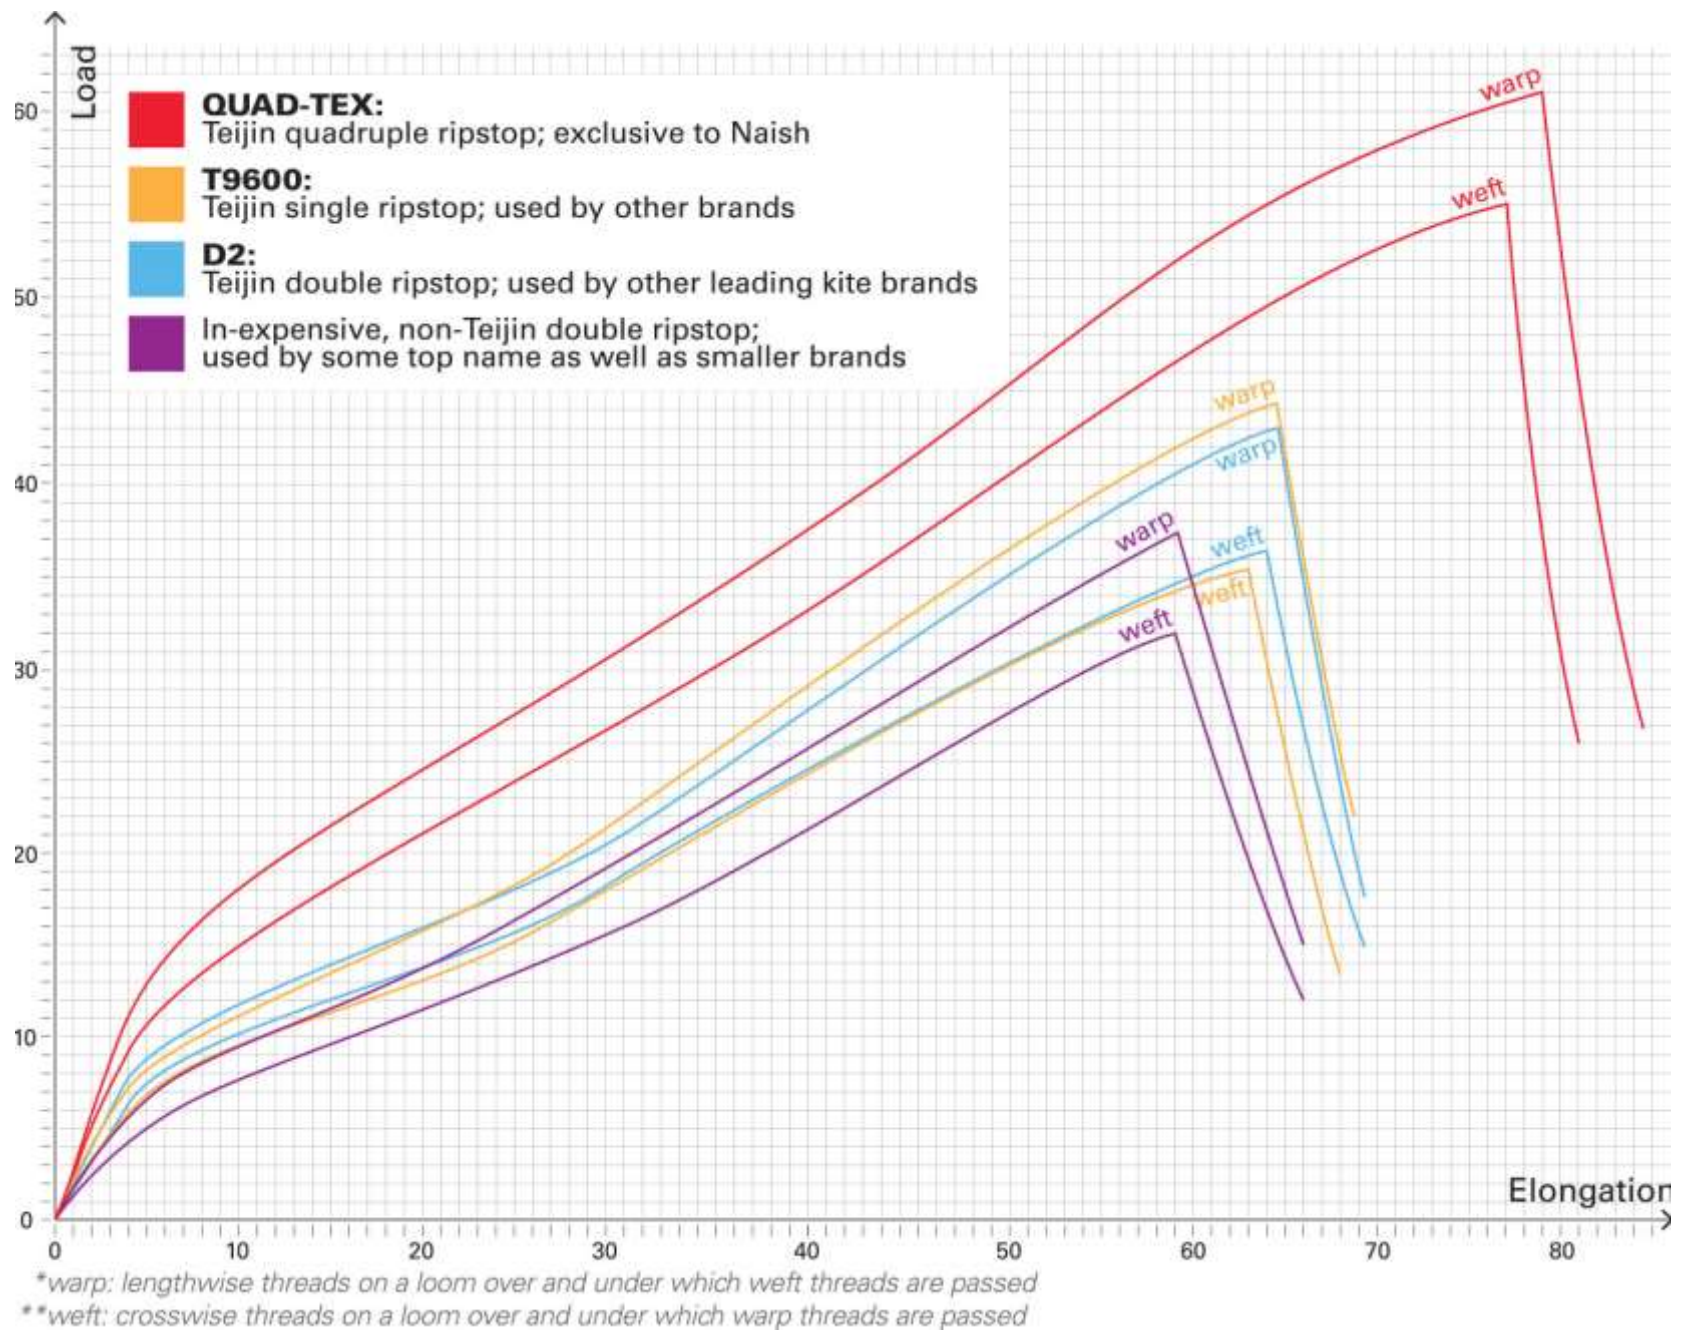

Between the elements and stress from demanding maneuvers, kites are exposed to constant abuse both on- and off-the-water. With inherent strength derived from quality materials, craftsmanship and finishing, Quad-Tex withstands punishing conditions while maintaining high-performance characteristics over the long-term.

## PROVEN RESULTS

Averaging 30% stronger, with the least elongation and stretch, Quad-Tex consistently outperforms all other leading canopy materials on the market. The result is a more rigid, responsive kite that you can count on day in and day out.

## STRENGTH. DURABILITY. PERFORMANCE.

Regardless of riding style, or skill level you need equipment you can count on. Safe, durable and built to last, Quad-Tex is, quite simply, the strongest, most reliable kite canopy material in existence.
